1. Introduction

Data protection and privacy have always been a concern for individuals when they're involved in the various electronic processes happening within the system.

The existence of certain data always poses risks to the citizens' privacy, and most importantly, information that contains personal identity numbers. The Aadhaar number is one such identity for which its secure management while availing various services has always been a concern.

Therefore, UIDAI mandates the secure storage of residents' Aadhaar numbers in a separate repository known as 'Aadhaar Data Vault' (ADV). Departments offering citizen services and using the Aadhaar number in their application workflows are required to use the Aadhaar Data Vault (ADV) for secure management of Aadhaar numbers and related data.

By establishing Aadhaar Data Vault (ADV - CHIPS) aims to enhance the security and privacy of residents' Aadhaar Number & related information, thereby reinforcing the overall integrity and trust worthiness of the Aadhaar ecosystem.

2. Features

- Flexibility to choose unique reference key generations to refer to one Aadhaar Number.
- Secure and seamless integration with the existing applications through REST API-based Aadhaar data vault service.
- Enabled by FIPS 140-2 Level 3 Certification, Certified device to manage Keys used for encryption and decryption.
- Transactions of statistics through a Dashboard (**Future Scope**).
- Audit and Access logs (**Future Scope**).
- Store your Aadhaar Number for individual transactions.
- Logical Key Segregation in the HSM.
- Support for migration of existing Aadhaar numbers.
- Duplicate Aadhaar check across ADV data storage.

3. Benefits

The primary purpose of the Aadhaar Data Vault is to securely store residents' Aadhaar numbers.

Aadhaar Data Vault helps government/private/PSU entities to securely store and manage Aadhaar numbers for various purposes, such as providing benefits and services to citizens.

The entity availing Aadhaar Data Vault as a service doesn't need to worry about maintaining the infrastructure, allowing them to focus their resources and efforts on core business activities instead of managing servers, data centers, or other hardware components.

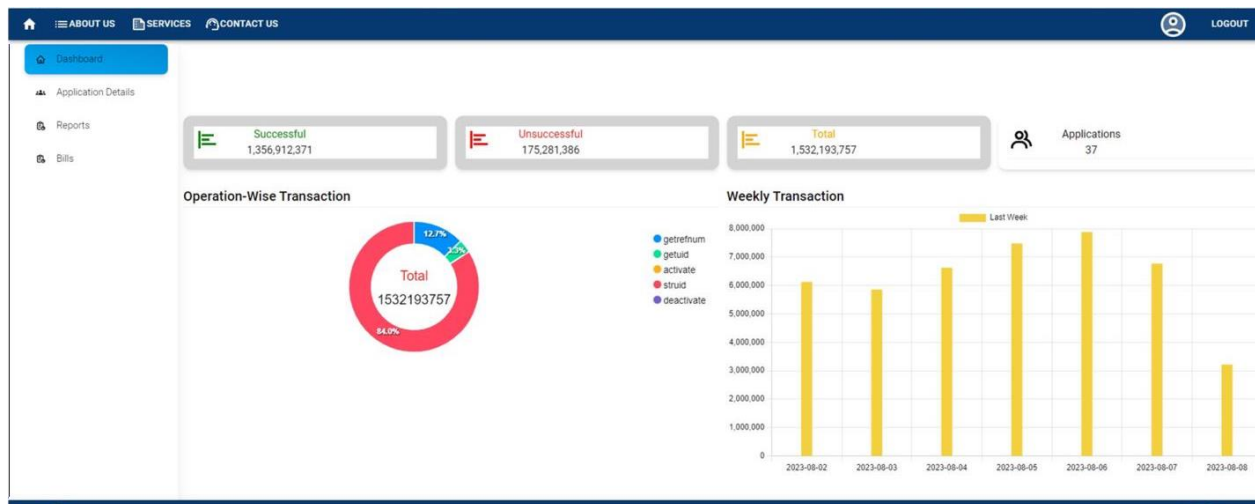

Entities availing Aadhaar Data Vault can avoid the significant expense associated with investing in HSMs. All Aadhaar numbers stored in ADV are encrypted using Hardware Security Module (HSM).

The Aadhaar Data Vault includes a feature for checking duplicate Aadhaar enrollments w.r.to reference key, which allows a department to verify if there are any duplicate Aadhaar records for schemes either within the same department/schemes or related to it.

Future Scope:

Entities availing ADV are offered with access to a department portal which provides a transparent interface of the ADV service through the provided functionality, departments can easily avail details about their transaction history, billing details and MIS reports etc. Additionally, departments can

also view details about the integrated applications, license key validity, and access to ADV APIs etc.

The Aadhaar Data Vault can also be tailored and customized to meet the specific needs of an organization and may be offered as a solution.

4. Onboarding Steps

4.1 Staging (Pre-Production) Environment

- a) Issuance of LOI will entail an entity to get access to the staging environment for a limited period till the time MoU is not signed. Sample LOI format is provided in Annexure-A.
- b) Please refer to Annexure-B for details related to technical integration.
- c) Annexure-C to be filled and signed copy of it to be provided along with the LOI to get the access of staging environment.
- d) CHiPS will provide staging (Pre-Production) access to test the ADV transactions using the Aadhaar & reference key data request to ADV Rest API details provided by CHiPS.
- e) IP whitelisting would be required in staging environment by CHiPS.
- f) Without MoU, staging access will be valid only for 15 days from the day of activation of the access keys etc. provided to the entity.

4.2 Production Environment

- a) The entity must sign the agreement (MoU) with CHiPS before availing Aadhaar Data Vault (ADV) services in the production environment. The agreement along with applicable commercials are shared along with this proposal. Kindly follow the steps mentioned under the MoU Signing process to complete the agreement.
- b) Successful testing at staging and MoU signing will enable the department to access the production environment.

4.3 MoU Signing Process

- a) Two original sets of the Agreement in duplicate are required.
- b) 1st Page of the Agreement is printed on Rs. 100 Stamp Paper.
- c) All other pages of the Agreement except the 1st are printed on Legal Green Paper (Preferred) OR on A4 Size Paper.
- d) All pages of the agreement in both sets have correct page numbers.
- e) Sequences of clauses of agreement in both sets are intact.
- f) Signature and Stamping is done on all pages of the agreement.**
- g) Ensure the checklist provided with MoU is followed to complete the agreement.

5. Major Clients availing Aadhaar Data Vault Service

- Food & Consumer Protection (CG-MARKFED).
- Directorate of Food (Core-PDS).
- Directorate of Professional Education (CG-VYAPAM).
- Directorate of Employment (CG-ROJGAR)
- Integrated Proactive e-Governance Services (IPeG) of CHiPS.
- Labour Department.
- Agriculture Department.
- Etc.

6. Contact Us

Annexure-A: LOI Sample

Ref No:

Date:

From:

_____.

To:

The CEO (CHIPS),
3rd Floor, State Data Centre Building,
Opp. New Circuit House,
Civil Lines, Raipur-492001
Chhattisgarh

Sub: Letter of Intent (LOI), to utilize Aadhaar Data Vault (ADV) Services of CHIPS,
for_____.

Sir/Madam,

With reference to the subject cited above, I would like to use the ADV Services for_____.

Therefore, you are requested to facilitate the Aadhaar Data Vault services of CHIPS to _____

Thanking You,

Name & Signature,

Department Name,

Place.

Annexure-B

➤ Frequently Asked Questions (FAQs)

1. How can Entity access ADV Services?

- a) Kindly follow the onboarding steps as mentioned in this document.
- b) Fill out the details as provided in Annexure-1 and send the signed form to the ADV team.
- c) Once the above step is completed then the department can obtain URLs and other details from CHiPS for accessing the ADV services along with Integration Kit.
- d) CHiPS will issue the Client ID and license keys to access the service.
- e) Department can register multiple applications and obtain different credentials for each application or can use the same credentials for multiple applications of theirs. Secure management of credentials obtained from ADV is the responsibility of the department.
- f) Department can collect the unique reference keys w.r.to Aadhaar Number for every request, i.e., reference key generated by one application can be referred by other applications of the same department or unique reference key across the applications. In that scenario, Aadhaar numbers received for different applications will be provided with unique/same reference numbers w.r.to Aadhaar Number. Consult with the CHiPS team for more clarity on reference key generation. Once configured the Client-ID cannot be reverted back.
- g) Department can receive the same reference key in case of the same Aadhaar number is sent for storage. ADV API returned or an already generated reference number to be returned as part of the store UID API call for already stored Aadhaar Number in the vault.

2. How does Department can integrate with ADV?

- a) Entities will be provided with integration kit providing support for integration in Java, .Net, PHP and Python.

3. What is the procedure to integrate with ADV Solution?

- a) Departments should go through the connector manual given in the integration kit before starting the integration.

- b) The integration kit will also contain an encryption/decryption code to test the end-to-end transaction. The entity can integrate the integration libraries as per their workflow requirement.
- c) The department will request Any Aadhaar numbers to be used for the staging environment and it is advised to use only those to test the integrations.

4. What is the correct procedure to test the integration?

- a) Departments are requested to test integration with the staging environment using the provided credentials and after that will be allowed to access the production.
- b) The CHiPS ADV always returns unique reference keys for their different applications w.r.to same Aadhaar number. It would be easy for departments to maintain the trail of transactions carried out from different applications.
- c) It is recommended not to perform test transactions in the production environment.

5. How to change Token after their expiry?

- a) In case of expiry of Token issued by CHiPS, a new Token needs to be obtained from CHiPS. The Token validity will be applicable as per the environment (staging/production) and may also be expired before that as well based on the department request due to breach of a Token. The Token may also be invalidated by CHiPS on non-fulfilment of the laid down process.

6. How to check network connectivity?

- a) Before accessing the ADV service, the department should ensure the network connectivity using a telnet command to the provided domain/IP and port of the ADV service. In case of no response, departments are requested to get their IP whitelisted from CHiPS.

7. Who to ensure Data Security and Privacy?

- a) Departments are supposed to ensure the resident's & API credential details security and privacy at the application end, i.e., where the data received from the department is being consumed. ADV web-services provided through CHiPS do not store any resident-specific information and only maintains the Aadhaar data in an encrypted form along with minimal metadata of transaction for auditing purpose. Kindly refer to the detailed guidelines about data privacy and security given in the agreement.
- b) It is recommended to department entity not to write any Aadhaar data in log files, text files etc.

8. How to fix errors generated while receiving the response?

- a) Error description (if any) returned by ADV should be checked in the connector manual.
- b) Issue still not understood/resolved need to be communicated on the below email-id as per the format given below. No personal emails would be entertained in this regard.

Email-ID: ankit.kumbalkar@cqchips.in

Sub: *Connector Integration Issue*

Dear Integration Team,

Kindly help in resolving the issue being faced w.r.t ADV Transaction/ ADV Integration.

Transaction-Type: *Store UID/Get UID / Get Ref Num*

Error: *<<Specify the Error >>*

Environment: *Staging/Production*

Connector Language: *.Net/Java*

Department Name: *<Name of the Department>*

Application Code: *<Department's Application Client-ID>*

Attachment: *Exception logs if any can be provided*

Annexure-C

Department and Application Registration form ☐ Staging ☐ Production

Table 1. Department Registration Form

Department Name	
Address	
Contact Person	
Designation	
Email	
Mobile	
Phone	
City	
State	
Pin code	
Category	Government

Table 2. Application Registration Form

Application Name	
Description	
Contact Person	
Email	
API access required for	☐ Store UID and Generate Reference Key. ☐ Get UID w.r.to Reference Key. ☐ Store UID/e-KYC Packet Data and Generate Reference Key. ☐ Get UID/e-KYC Packet Data w.r.to Reference Key.
Unique reference Key required across all	☐ Yes ☐ No

applications registered under the department	
The reference number to be returned or error during stored UID API call, in case of already stored Aadhaar Number	☐ Return Error ☐ If return same reference number for different UID.
Algorithm used for the encryption and decryption of data for all applications	AES-256
HSM Key allotted to the department will be used to encrypt and decrypt the data for all applications	Yes
Application Category	☐ Government Department
Public IP (s) of the Department for which access to be provided	

Signature and Stamp of the Authorized Person

Note: Fill separate application registration form for multiple applications that need to be registered against the department.

The completion of IP Whitelisting for the Aadhaar Data Vault Service in the Staging Environment may take up to 03 working days and for the Production Environment it may take around 05-07 working days as it involves the establishment of necessary policies and approvals.
